Technology Summary

This invention focuses on addressing challenges in detecting and characterizing malicious scanning activities in network data. It proposes the use of network telescopes, also known as "Darknets," to capture and analyze unsolicited traffic directed towards unused IP addresses. The data collected from Darknets can help identify patterns of malicious scanning, which are crucial for preventing cyber-threats. However, analyzing Darknet data presents difficulties due to its heterogeneous nature, high dimensionality, and non-linear interactions. To overcome these challenges, the invention introduces a framework involving deep neural networks for dimensionality reduction and clustering. This framework aims to create information-preserving representations of scanner data, enabling the identification of distinct scanning behaviors.

Application & Market Utility

The need for strong cyber security exists across many different industries including manufacturing, communication and financial services, energy sector, and health care. The system operates in a cloud-based hardware environment and can be accessed through a user interface to provide analysis results to users or third parties interested in cybersecurity insights.

Next Steps

The next steps for this invention involve refining the framework using deep neural networks to detect malicious scanning activities in network data. Seeking collaboration and/or licensing opportunities to further develop and integrate the framework into existing cybersecurity systems

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
