Improved Biopolymer Coatings for Packaging Materials

ID# 2012-3956

Biopolymer Composites used as Coatings

Technology Summary

This technology is a composition comprising one or more cationic polymers (e.g., chitosan) and one or more anionic polymers (e.g., carboxymethyl cellulose), which are combined in a polar solution and vigorously blended to obtain a polymer blend wherein the viscosity or particle size of the cationic polymers and the anionic polymers is reduced after the blending. The resultant composition can be employed as a coating to improve the surface properties for a wide range of materials (e.g., wood or paper products) or could be used as an adhesive. The figure above shows a scanning electron microscope image of a cross section of a cellulose paperboard sheet coated with a polymer blend. The polymer blend coating is clearly seen on the surfaces and measures approximately 15 microns in thickness.

Application & Market Utility

Sustainable, cost effective and ecologically compatible materials are needed for a diverse array of volume commercial applications that currently employ synthetic alternatives. Biologically derived polysaccharides such as cellulose, starch and chitosan are among the lowest cost, highest volume biomaterials produced globally. New processes for forming materials based on polyelectrolyte complexation of these polysaccharides opens up new opportunities for the development of biomaterials that challenge the performance and cost of synthetics.

Next Steps

Seeking research collaboration and licensing opportunities.

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
