

# Process for Production of Graphene/Silicon Carbide Ceramic Composites

ID# 2012-3972

FESEM of ceramic matrix

## Technology Summary

This single-step process makes in-situ graphene containing silicon carbide (SiC) matrix ceramic composites with extensive graphene growth within the SiC matrix. This approach allows for processing dense, robust, highly electrical conducting, tough and well dispersed nanocomposites having a percolated graphene network, while potentially eliminating the handling of potentially hazardous nanostructures. The simplicity and speed of this process eliminates certain production costs, while improving yields. While demonstrating a range of physical strength between 300-1000 MPa for these novel, homogenous graphene/SiC nanocomposites, the graphene's electrical conductivity is nine orders of magnitude higher than the electrical conductivity of graphene free SiC ceramics with similar amount and type of sintering additives.

## Application & Market Utility

SiC ceramics exhibit excellent thermal and high temperature mechanical properties suitable for a wide range of structural applications. The addition of graphene as filler further enhances those properties, including outstanding tribological and electrical performance. Graphene/SiC components could be used in technological applications under strong, demanding conditions where good electrical, thermal, mechanical and/or tribological properties are required, such as micro and nanoelectromechanical systems (MEMS and NEMS), sensors, actuators, heat exchangers, breaks, components for engines, armours, cutting tools, microturbines or microrotors.

## Next Steps

Sample evaluations by prospective materials manufacturing licensees and/or application end users

TECHNOLOGY READINESS LEVEL

4-7

### Seeking

Investment | Licensing | Research

### Keywords

- silicon carbide (SiC) ceramic composites
- single-step in-situ process
- nanocomposites and graphene
- U.S. Patent No. 9,988,313
- Patents in Germany, Spain and UK

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at [invent.psu.edu](http://invent.psu.edu).

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
