

Computationally Designing Metabolic Conversions

ID# 2015-4315

PennState

Two-step Path-design Procedure

Technology Summary

The subject invention provides a computational framework for designing optimum stoichiometry and intermediate metabolic reaction steps for conversion between a source and target metabolite. This is a pathway design tool that optimizes the overall stoichiometry by exploring exhaustive co-reactant/co-product combinations. The invention can identify non-intuitive solutions for driving forward thermodynamically unfavorable conversions. Apart from identifying intervening reactions, this software also ranks the various identified designs based on factors like overall carbon/energy yield, network size and free energy of change. The invention also includes economic considerations implied by the prices of the reactant/product molecules.

Application & Market Utility

Existing procedures for de novo pathway design trace pathways connecting a single substrate to a single product, however metabolic conversions do not generally involve linear paths from substrate to product. Therefore, there is a need for a computational procedure that can take into account all the factors acting behind the complex metabolic reactions leading to formation of products. This invention will be used to engineer optimal pathways for harnessing metabolic machinery to convert feedstock substrates to a growing range of products.

Next Steps

Seeking research collaboration and licensing opportunities.

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
