

Self-Balancing Photovoltaic Energy Storage System

ID# 2016-4446

PennState

Benchmark PV Farm Topology

Technology Summary

Current power electronics used in today's PV/solar farms, particularly if they employ storage solutions, are quite complex and expensive. Energy storage in systems is desirable as it permits accommodation for generation intermittencies and ancillary services to the grid, such as frequency regulation and demand response. As the intermittent renewable resources such as solar and wind power increase market penetration, balancing instantaneous electricity supply and demand will become more critical for the traditional power grid. However, such power electronics for energy storage solutions can cost up to 10-15% of the total cost of the solar farm.

Application & Market Utility

This new hardware/software package provides a self-balancing solution for integrating battery storage into photovoltaic arrays through the use of a hybrid PV/storage cell design and system. Regulation by software control will maximize the solar power generation. Advantages include up to 30% lowered costs for the power electronic components, maximization of energy conversion efficiency of the overall PV generation system, self-balancing capability, and reduced transmission losses in grid systems.

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
