

Improved C-C Composites with Added Heat Shielding

ID# 2018-4777

Graphene-anthracene

Technology Summary

An improvement in the synthesis of carbon-carbon (C-C) composites has been made. Instead of using carbon fiber for reinforcing and control of macroscale properties, this technology uses the matrix for self-reinforcement. Penn State researchers have improved the properties of C-C composites by using carbon allotropes as additives to control and direct the microstructural evolution of the C-C composite during its fabrication. As a result, extensive pre-fabrication of filaments, yarns, and weaves are bypassed. The technology allows for the properties of graphene and nanotubes to be magnified in non-graphitizing matrices based on polymeric resins which will increase strength and conductivity of C-C composites.

Application & Market Utility

Carbon-carbon (C-C) are important engineering materials, because they can perform structurally at extreme temperatures and have superior thermal shock, toughness, ablation, and high-speed friction properties. Accordingly, C-C composites are particularly important in aerospace and mobile applications. Specifically, C-C composites can be used for engine exhaust parts, aircraft sections and leading edge components. Vehicle parts include drive-shafts, panels and brackets.

Next Steps

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
