Sample molecules

Technology Summary

Compounds of ring systems, 2,3-Diaryl-2,3-dihydro-4H-1,3-thiazin-4-ones and 2,3-Diaryl-1,3-thiazepan-4-ones, have been successfully prepared, along with their respective S-oxides.

Application & Market Utility

Antifungal testing of six 2,3-diphenyl-1,3-thiaza-4-ones shows that some compounds have activity against two fungi (cryptococcus neoformans & scedosporium prolificans) that is comparable to or better than fluconazole, and without significant cytotoxicity. S-oxides of these compounds may be used for muscle relaxants and anti-anxiety. Other potential uses include tumor inhibition and HIV-RT inhibition.

Next Steps

We have made small quantities of dozens of compounds and are seeking screening partners.

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind.
