# Concrete Mixtures for 3D Printing ID# 2019-5003

Typical printed cylinder

## **Technology Summary**

Cementitious three-dimensional construction printing (C3DCP) employs additive manufacturing to fabricate buildings and structural components. The Penn State inventors experimentally determined the C3DCP concrete mixture compositions for high performance concrete and for ordinary concrete used in regular construction. The Penn State researchers examined the range of mixture composition consisting of different ingredients and corresponding performance analysis. Sensitivity analysis of the various compositions highlighted the tradeoffs with compressive strength test, setting test and flow table characteristics, whether for a robotic arm or gantry system. The inventors also conducted cost sensitivity analysis relative to performance as it relates to certain ingredients such a calcium chloride, required strength and the ambient conditions.

# Application & Market Utility

The construction industry has begun to employ large 3D printers to manufacture major structural components and buildings, increasing construction efficiencies and reducing waste and labor savings from the higher productivity and quicker construction. Greater understanding of the specifications for workability, buildability, flowability and pumpability accelerates the industrial adoption curve of C3DCP for the resulting cured concrete with the desired strength and setting time characteristics that avoids buckling during printing and cracking after setting.

# Next Steps

A range of prism and bar-shaped prototypes have been tested. Seeking licensing opportunities.

Invent Penn State is a Commonwealth-wide initiative to spur economic development, job creation, and student career success. Invent Penn State blends entrepreneurship-focused academic programs, business startup training and incubation, funding for commercialization, and university-community collaborations to facilitate the challenging process of turning research discoveries into valuable products and services that can benefit Pennsylvanians and humankind. Learn more at invent.psu.edu.

Penn State is an equal opportunity, affirmative action employer, and is committed to providing employment opportunities to all qualified applicants without regard to race, color, religion, age, sex, sexual orientation, gender identity, national origin, disability or protected veteran status.
